# The new logistics reality: *Delivery with drones*

## VENUE

**Celje, Slovenia: FACULTY OF LOGISTICS, UNIVERSITY OF MARIBOR**

## DATES

**12 - 18 June 2022**

## ABOUT

### **Are drones the future of last-mile delivery? Is society ready to use them?**

This year's summer school will be practically oriented and dedicated to drones. You'll gain an insight into drone technology and how the legal requirements follow the concept of commercial use of drones. In this case, they have to be autonomously driven – should every company have its own platform, or do we need an Uber for drone delivery? And, of course, is it cost-efficient to use drones.

During the two courses, we'll cover all the above questions. You'll see how Slovenian biggest postal logistics company Pošta Slovenije is using drones in practice.

You'll have a chance to use our own UATM platform, and with our partner Pošta Slovenije you'll tackle the challenges of commercial drone delivery in actual cases because you'll have to plan, organize and execute the actual delivery with the real package.

## COURSES

**U-SPACE AND THE CHALLENGES OF COMMERCIAL UNMANNED AERIAL VEHICLES USE  
REAL-TIME DELIVERY WITH DRONES**

## GET

**4 ECTS**

## IDEA

**Blended intensive programme:** a short, intensive programmes that use innovative ways of learning and teaching.

*We aim at reaching all types of students from all backgrounds, study fields and cycles by enabling new and more flexible mobility formats that combine physical mobility with a virtual part.*
